A Computer Science and Engineering graduate seeking a full-stack development role. I create efficient, responsive, and well-documented applications with key skills in **Java**, **Spring Boot**, **Flutter**, and **React.js**. I am dedicated to continuous learning and solving complex problems to deliver impactful solutions.

Education

Karmaveer Bhaurao Patil College of Engineering, Satara *November 2022 – Present*
Bachelor of Technology in Computer Science Engineering

Skills

Languages: Java, Python, JavaScript (ES6+), Dart, HTML5, CSS3, SQL
Frameworks/Libraries: Spring Boot, Spring Security, Flutter, React.js, Node.js, Express.js, Material UI, Hibernate, JDBC, Spring Data JPA, GetX, Redux
Databases: MySQL, MongoDB, Firebase Firestore
Tools & Platforms: AWS, Git, GitHub, Docker, Postman, JWT, WebSockets, Firebase, REST APIs
Concepts: Agile Development, Version Control

Work Experience

PAARSH INFOTECH PVT. LTD., Pune, Maharashtra *January 2026 - June 2026*
Web Developer Intern

- Architected and optimized full-stack web solutions for live production, developing responsive frontend UI components and engineering robust backend **REST APIs** to reduce data retrieval latency by 20%.
- Spearheaded cross-platform mobile application development alongside web platforms, ensuring seamless feature integration and state management across mobile and web ecosystems.

Projects

PumpQ: Full-Stack CNG Slot Booking Platform | *Spring Boot, Spring Security, React.js, MySQL, WebSockets* | **GITHUB** | *June 2026 – July 2026*

- Engineered a Spring Boot backend with a **custom MultiRoleAuthenticationProvider**, enabling JWT-secured **RBAC** across 4 user roles.
- Constructed **Razorpay payment gateway** with server-side **HMAC signature verification** and an automated **QR code check-in system** using ZXing, cutting manual verification time by 60%.
- Established **real-time slot updates** via **WebSocket (STOMP over SockJS)** and a Super Admin dashboard with paginated history using Spring Data JPA projections, reducing stale-data incidents by 50%.

Vogue Vault: Full-Stack E-commerce App | *Flutter, Spring Boot* | **GITHUB** | *April 2024 – May 2024*

- Architected and built a complete backend system using **Spring Boot and MySQL** to manage order processing, ensuring seamless data flow and a 40% reduction in query time.
- Integrated secure user authentication and payment workflows using **Firebase Authentication and Storage**, and implemented UPI payment gateways.
- Enhanced mobile app performance with **GetX**, reducing screen latency by 35% and APK size by 25% via on-demand image loading and lazy rendering.

AgroRover: Agricultural Mobile App | *Flutter, REST API* | **PLAY STORE** | *January 2026 – April 2026*

- Developed and successfully **deployed** a cross-platform mobile application to the **Google Play Store**, rigorously managing app permissions, **location disclosures**, and release console compliance.
- Integrated the **Zwitch Payment Gateway** utilizing a **secure custom in-app web view** to overcome native SDK limitations, ensuring an uninterrupted and secure financial transaction flow.
- Engineered real-time location tracking features utilizing precise **geo-location** APIs, enhancing core app functionality and boosting user engagement by 35%.

Achievements/Certificates

- Awarded **3rd** place in the college Mini Project Competition as the **Team Lead**.
- Secured **3rd** place in a college-level **Group Discussion** (GD) event.
